Answering key question: how COVID-19 does affect gender equality?

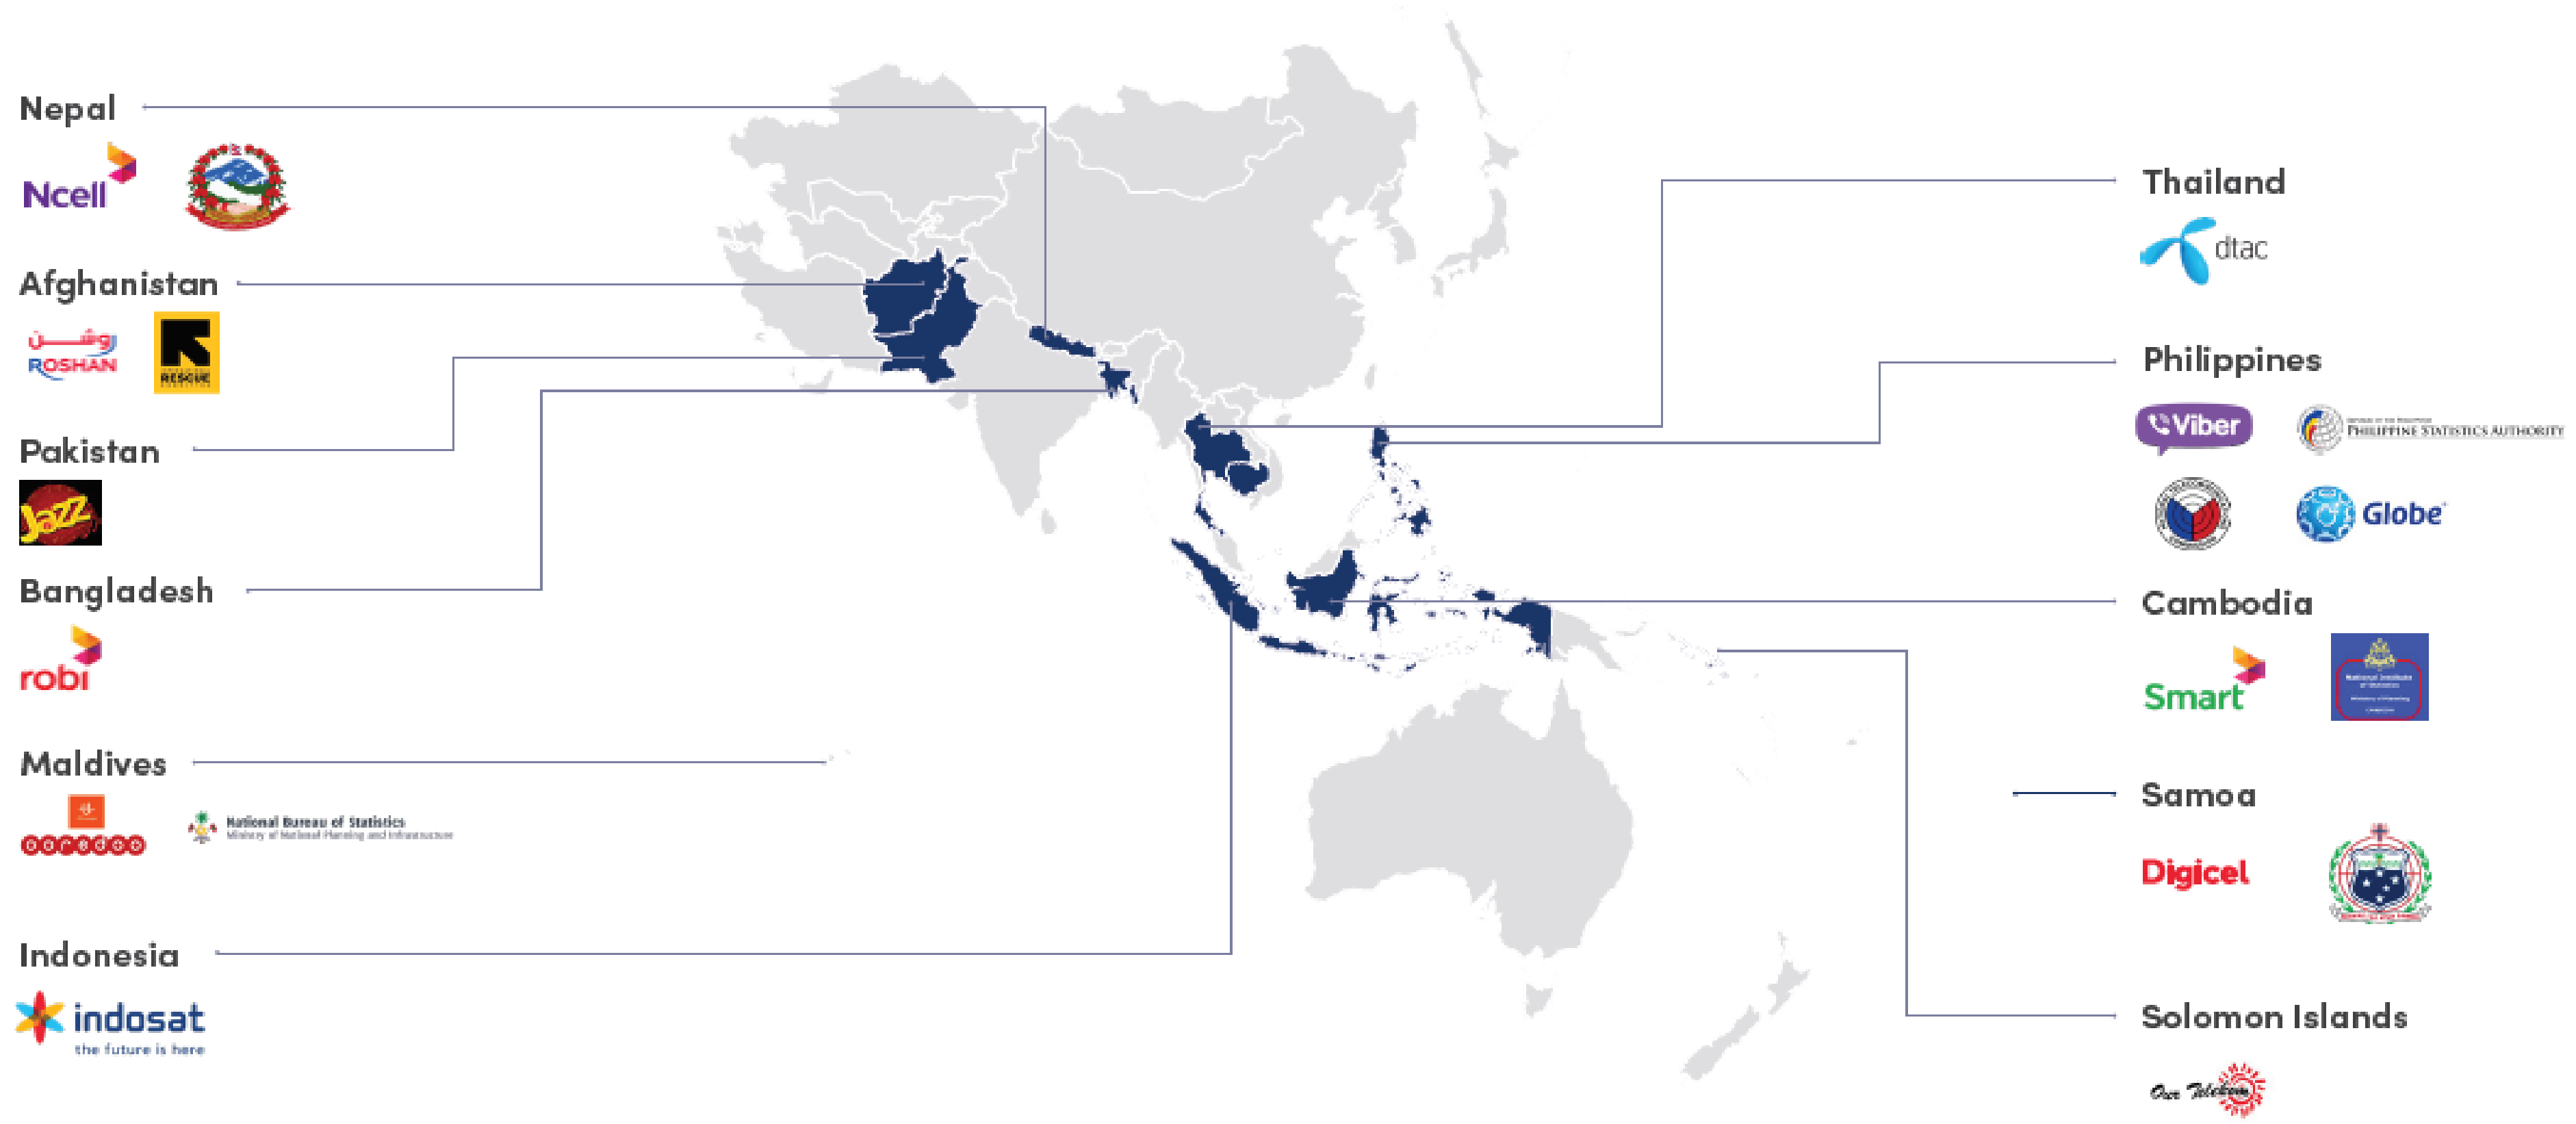

COVID-19 risks to further jeopardize the availability of gender data, but not its

COVID-19 poses unprecedented and unique challenges to traditional methods of data collection:

- Face-to-face data collection methods not feasible due to lockdown regulations (risks of contagion, COVID-19 safety protocols);
- Prioritization of economic indicators as main measurement domain, with limited sex disaggregation (e.g., household as unit of analysis);
- Measurement of unpaid domestic and care work particularly relevant during COVID-19: the household absorbed increased demands for care and domestic work. No substitution effects with services in public and private sector (e.g., homeschooling);
- Alternative methods: unequal coverage of complete sampling frames for CATI and CAWI among countries.

With COVID-19 innovative approaches are needed

Regional roll out of UN Women Rapid and Assessment Surveys in partnership with the private sector, national Governments and international organizations

As a result of COVID-19, women's economic resources are being hit hardest

COVID-19 is hitting women's income from savings, investments and properties hardest

COVID-19 is hitting women's income from savings, investments and properties hardest

61% OF WOMEN saw decreases

58% OF MEN

More women saw decreases in remittances received, a particularly relevant source of income for the poor¹

66% OF WOMEN

61% OF MEN

COVID-19 increased the unpaid domestic & care workload, and women are bearing

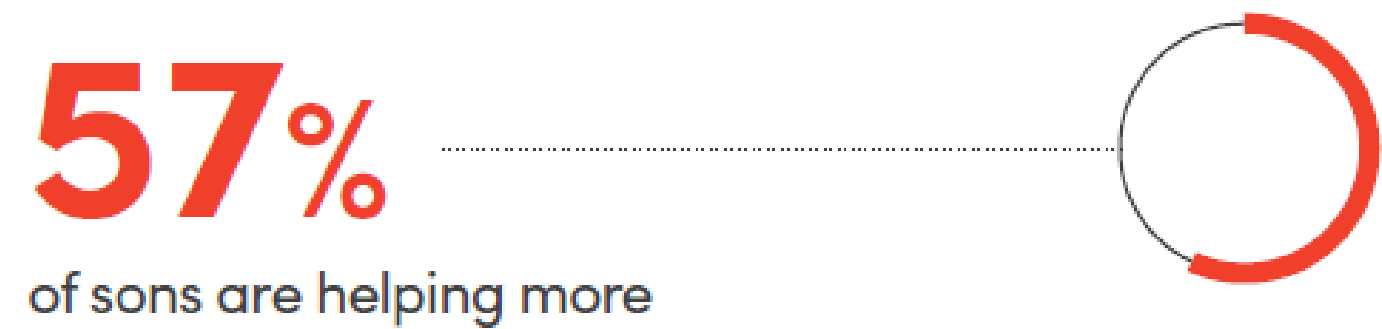

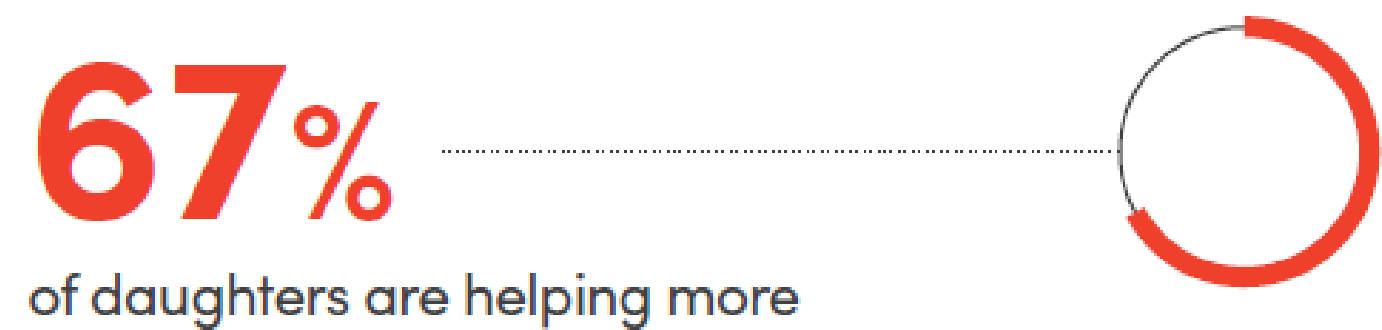

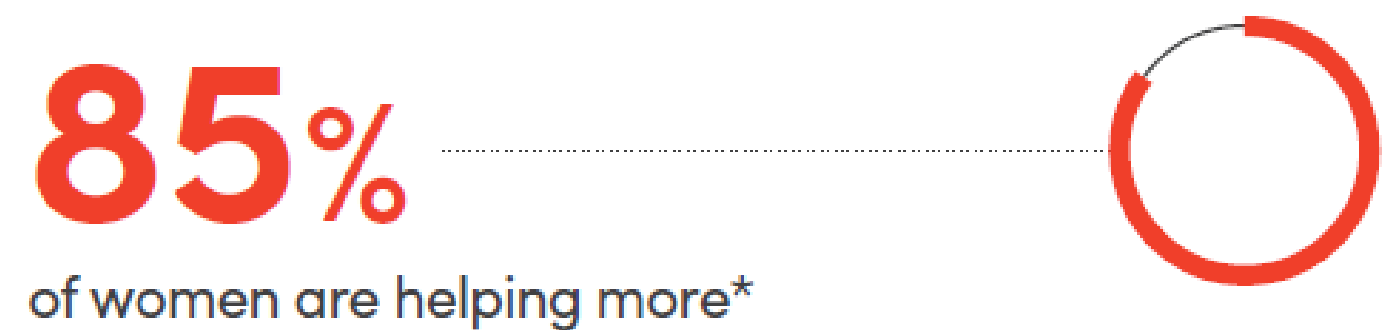

Proportion of people whose time allocated to unpaid domestic and care work increased since the spread of COVID-19, by sex and intensity (percentage)

Source: UN Women (2020) Rapid Assessment Surveys on the Consequences of COVID-19 in Asia and the Pacific.

COVID-19 increased the unpaid domestic & care workload, and women are bearing

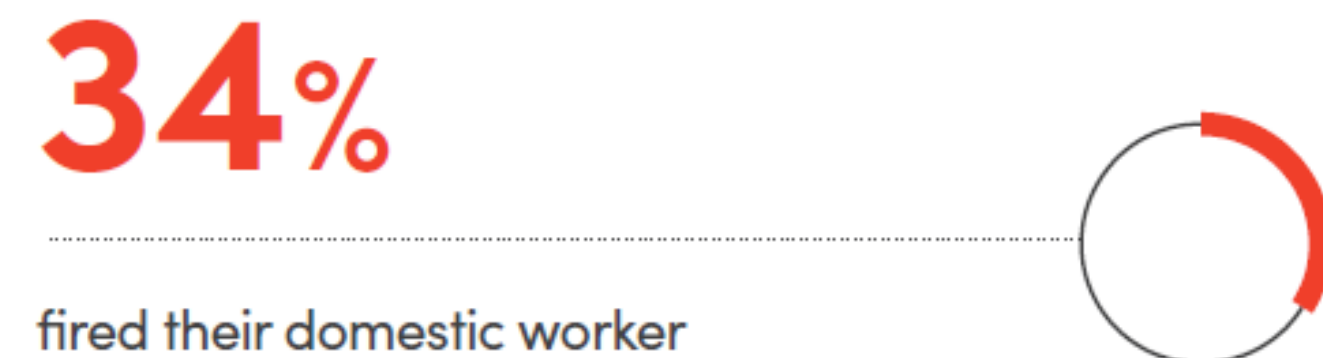

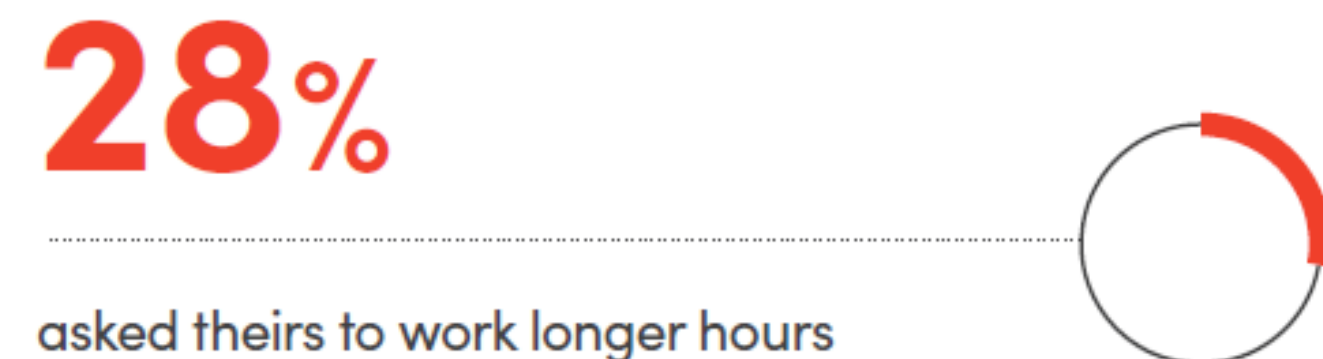

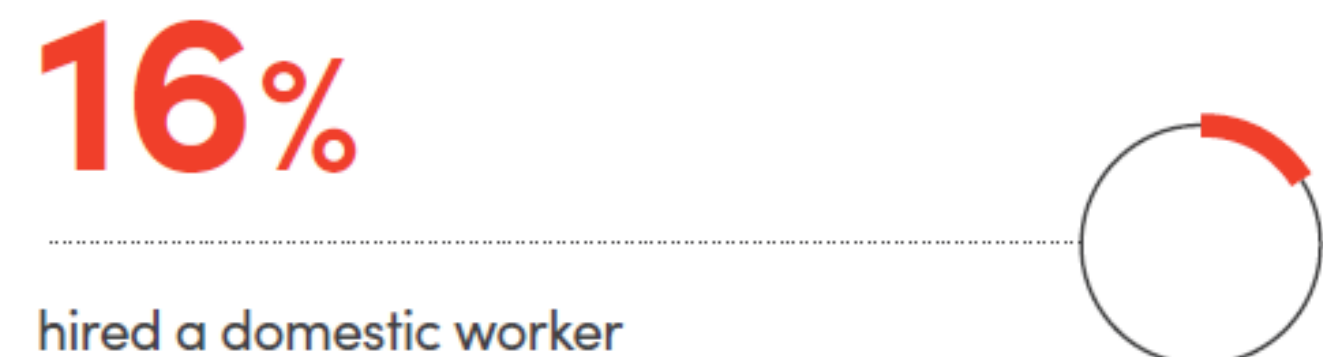

COVID-19 MULTIPLIED THE WORKLOAD AT HOME AND WOMEN ARE PAYING THE PRICE

*Women and men were asked whether their partner helps more, so an assumption is made that their partner is of the opposite sex, even though this may not be the case.

DOMESTIC WORKERS HAVE HELPED COPE, BUT MANY LOST THEIR JOBS SINCE THE SPREAD OF COVID-19

Pay has fallen as formal workers see their hours reduced and informal workers

The pandemic is pushing people out of paid work and shrinking earnings and wages

63% OF PEOPLE saw income losses from paid work

50% OF WOMEN in formal employment work less hours

35% OF MEN

COVID-19 TOOK INFORMAL WORKER'S JOBS, AND MOST LACK SOCIAL PROTECTION BENEFITS

of women outside formal employment lack unemployment benefits or government financial support

of men

Key takeaways

- Prior to COVID-19, there were **gender gaps in labour force participation**, with women at disadvantaged;
- The **unequal** distribution of **unpaid domestic and care work** among family and household members acts as a barrier to women economic empowerment;
- COVID-19 has **deepening pre-existing gender inequalities** in the world of unpaid and paid work, with women and vulnerable groups (e.g., informal workers) at disadvantage;
- COVID-19 is putting the achievement of the 2030 Agenda at stake in Asia and the Pacific region, especially for women and girls;
- **Gender data** is key to provide evidence on the gendered effects of the current pandemic and to inform a **gender-sensitive recovery**.
